BMC ELECTROPLAST

COMPANY PROFILE

connect@bmcepl.com || samrat@bmcepl.com https://bmcelectroplast.com/

BMC is an IMS certified company founded in 1986 and is engaged in R&D and manufacturing of medium voltage switchgears, instrument transformers and various cast resin components.

BMC is the first SME in India to have been certified by DSIR (Department of Scientific and Industrial Research operating under the Ministry of Science and Technology of the Government of India) as an R&D center for MV switchgear .

STAKE HOLDERS

OUR TEAM

BMC was founded by the visionary technocrat, Late Mr. Santanu Mitra, and is currently led by a team of four engineer-directors: Mr. Subodh Kr. Banerjee, Mr. Rajiv Bhargava, Mr. Girish V. Magre, and Mr. Siddhartha Mitra.

Supporting the leadership team are Mr. Samrat Banerjee (Head - Operations Excellence) and Mr. Saptarshi Mitra (Head - Strategic Initiatives), who play a pivotal role in strengthening operational efficiency, business development, and strategic initiatives.

Backed by a dedicated workforce of over 150 professionals, including graduate engineers, technical supervisors, and skilled technicians, BMC is committed to driving innovation and advancing technology in the field of power system equipment.

WORKPLACES

Head office & Works 1:
Located at Joka with a total area of 60,000 sq.ft. and a covered area of 30,000 sq.ft. along with a two-storey office facility and more than 30% reserved for green space within the factory premises.

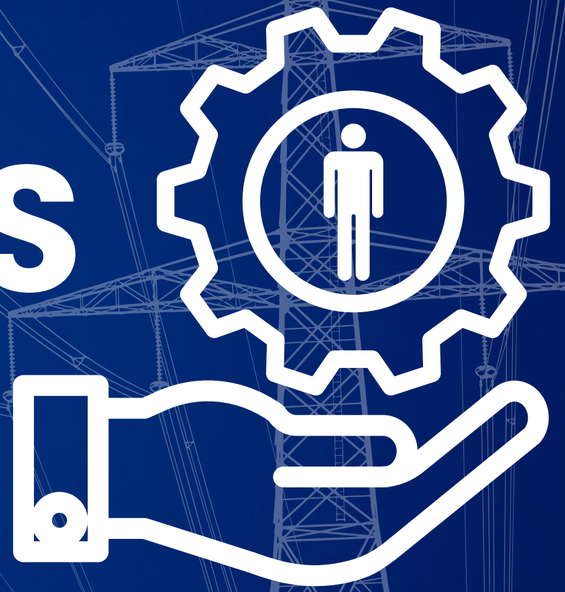

Technology Centre & Works 2:
Located at at Aurangabad, Maharashtra with a total area of 70,000 sq.ft. and a covered area of 35,000 sq.ft. along with a two-storey office facility and more than 30% reserved for green space within the factory premises.

LOKMAT TIMES

Kolkata firm supplies transformers for FIFA World Cup in Qatar

dailyhunt

The Indian EXPRESS

Around 3,000 transformers manufactured by a Kolkata-based company will help secure power distribution in stadia and related infrastructure during the upcoming football world cup in Qatar.

BMC Electroplast, an MSME unit, has supplied current and voltage transformers, which are critical components in the power distribution system, for the FIFA world cup 2022, a company official said.

The Telegraph

A 66-year-old man in Uttarpara in the Hooghly district was among millions in West Bengal who watched on television the dazzling opening ceremony of the Fifa World Cup at the Al Bayt Stadium on Sunday evening.

But Subodh Kumar Banerjee is not just a football fan. He has had a crucial role in what is arguably the biggest sporting spectacle on the planet.

Transformers built by a firm founded by Banerjee are critical components of the power distribution system in the stadiums hosting the matches.

BMC Electroplast, which has a production unit in southwest Kolkata's Thakurpukur, has supplied around 3,000 transformers to Qatar.

The transformers are not like the usual ones seen on Kolkata roads — which receive power from plants and supply it to domestic and commercial units.

"Called current transformers (the ones sent to Qatar), the instruments reside in the switchgear boards. They have two main functions. They keep track of the volume of electricity consumed in each feeder line. In case of a short circuit in a supply line, a

current transformer helps in switching off supply to that feeder line," said Banerjee, who

did his electrical engineering in 1977, from what was then known as the Regional

Engineering College, Durgapur (now called the National Institute of Technology,

Durgapur).

The switchgear boards are usually in the underground electrical rooms below the

stadiums, he said.

"When I saw the opening ceremony, I felt a sense of ownership. I knew everything would go off smoothly. But until it was over, there was a sense of anxiety," said Banerjee.

He would have travelled to Qatar for the inauguration but an accident — he slipped and

fell in his house — in 2021 led to a fractured left knee. He is still having to use a walker.

Between 2014 and 2018, Banerjee had to visit Qatar three times. "The stadiums were a

heap of dust and construction material back then. I don't remember if they had their

names finalised. To see the stadiums now, all decked out, is a surreal experience. I can't

even recall the stadiums I went to," he said.

But even back then, the scale of the work had Banerjee in awe. The men and machines kept working in the searing heat and amid a sea of dust.

"During the first trip, I was driving to a stadium when the car had a flat tyre. As the driver started to replace it, I rolled the window down. A gust of wind, that felt like fire, hit me. I

felt my cheeks burning," he said.

The transformers built in Thakurpukur were approved by Qatar Electricity & Water Corporation, commonly known as "Kahrama", in charge of the implementation of an integrated infrastructure for the tournament.

Banerjee's firm supplied the transformers via Tamco Switchgear (Malaysia), an erstwhile

L&T company but currently controlled by power equipment major Schneider.

"Our company is a vendor of Tamco. We have worked with them before," said Banerjee. Designing the prototype and getting the same approved was a tedious process because of the stringent norms of Kahramaa. Job done, now Banerjee wants to watch every bit of the Cup.

A regular at the Mohun Bagan ground in his school and college days, Banerjee played football and hockey in his youth. His

money is on his favourite team this time.

"Brazil are the favourites. This World Cup might bethemoment ofglory for Neymar. He is Bohemian. But he has class," said Banerjee, who lives with his wife andson. His daughteris settled inPune.

Banerjee started the factory with his late friend, Santanu Mitra, in 1980. The two were roommates in the engineering college.

Now, the company has four directors, including Banerjee and Siddhartha Mitra, brother of Santanu Mitra. There are around 100 workers.

Banerjee said that Bengal used to be the hub of the electrical engineering industry when she started. It pains him to see the steady decline in the following decades.

"We are to blame. It is our collective fault," he said.

বাংলা

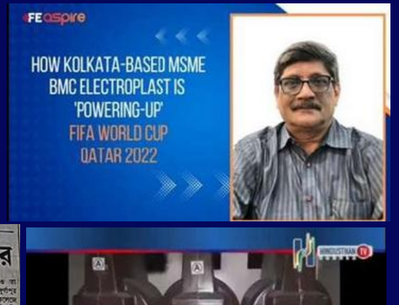

বিশ্ববাংলা সংবাদ

কাতারে ফিফা কাপ শেষের ঘোষণা সুধির ও কতের বাংলার সং ।

As FIFA World Cup fever grips soccer fans across the globe, West Bengal has a vital role to play this time in the 29-day extravaganza. An electrical component manufacturing company, BMC Electroplast Pvt Ltd, an MSME unit in Thakurpukur in Kolkata's southern fringe, supplied around 3,000 transformers to Qatar. The gadgets will help secure power distribution in the stadium and related infrastructure. A company official said nearly 50 per cent of the total voltage and current transformers required for the soccer event was supplied by the company.

INDOOR VACUUM CIRCUIT BREAKERS AND SUB-ASSEMBLY UP TO 36 kV

- Technology Transfer And Complete Type Testing Consultancy For MV Switchgears.
- First in India to offer technology for VCB/VI design to Indian manufacturers.

- First in Asia to offer technology for VCB/VI design to European and Overseas manufacturers.
- Over 25 patents/ design registrations on Switchgears/ Switchgear components
- First MSME in India to develop economic, indigenous, and reliable medium voltage Vacuum Circuit Breakers for Industry, bringing down costs by 30 percent.

VACUUM CIRCUIT BREAKERS FOR OUTDOOR APPLICATION

36kV COMPACT SUB-STATION

PORCELEIN CLAD OUTDOOR
VCB UP TO 36kV

36kV OUTDOOR KIOSK
INCLUDING VCB, CT AND PT

- Unique low cost Compact Sub Station design for Windmills in India

VACCUM CONTACTORS, EMBEDDED VI POLES AND SUBASSEMBLIES FOR MEDIUM VOLAGE SWITCHING UP TO 36kV

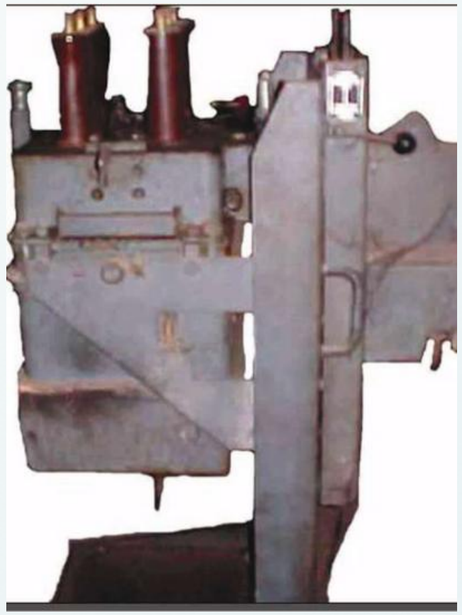

- Pioneers in Epoxy Cast Vacuum Interrupters (Embedded Poles) for Vacuum contactors world wide.
- Unique compact design of MV Vacuum Contactors.
- First MSME in India to develop economic, indigenous, and reliable medium voltage Vacuum Contactors for Industry, bringing down costs by 30 percent.

RETROFIT SOLUTIONS

BMC has a background of retrofitting various OCBs and VCBs of imported and obsolete brands for nearly two decades, and has successfully commissioned more than 2,000 OCBs and VCBs of 25+ different makes across the country and abroad.

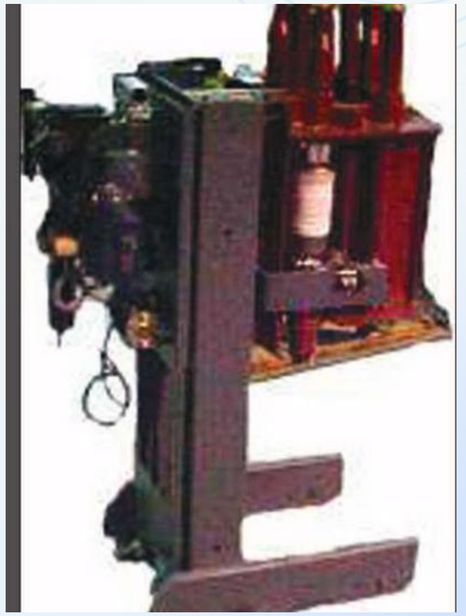

What is Retrofit?

- Upgradation of Technology
- No Change in Existing Panel and Existing Breakers
- Existing Breaker Remains Spare

Oil /SF6 Circuit Breakers

Retrofit

Vacuum Circuit Breakers

RETROFIT SOLUTIONS

Why Retrofit?

- **NEW LEASE OF LIFE FOR THE SWITCHGEAR** - Wear and tear occurs mainly in moving & arc quenching parts.

- **ALL THE ADVANTAGES OF VACUUM TECHNOLOGY COME AS BONUS, VIZ.:**
  1. Very high reliability and safety.
  2. High no. of unattended interruptions.
  3. Wide variety of applications such as motor, transformer & capacitor switching, etc.

- **BUS SHUT DOWN NOT REQUIRED.**

- **NO ALTERATION IN THE EXISTING PANEL** - The existing breaker can be used as a spare one. Hence, doubling the reliability.

- **MAINTENANCE-FREE OPERATIONS** - Less downtime.

RETROFIT SOLUTIONS

Why Retrofit?

- **REPLACEMENT TIME: 6-8 hrs.**
- **NEW CIVIL WORKS OR CABLING GETS ELIMINATED.**
- **CUSTOMIZED SOLUTION FOR IMPORTED AND OBSOLETE MODELS.**
- **DESIRABLE IN CASE SPARES OF OLD BREAKERS ARE NOT AVAILABLE, VIZ.: IMPORTED BREAKERS.**
- **MANUAL OPERATION BREAKERS CAN BE CONVERTED TO MOTORISED VERSIONS.**
- **COST EFFECTIVENESS -**

1. Reduced capital costs. 2. No erection & commissioning cost. 3. No civil works or cabling.

INDUSTRY 4.0:

Digitization & Smart MRO (Maintenance, Repairing & Overhauling) in Power Systems for Sustainable Energy

BMC EXCELLENCE REDEFINED Since 1986

TECHNOLOGY CENTRE

Solution Partner

RAPTRONICS SYSTEMS PRIVATE LIMITED

Why Digitization is a Requirement

Traditional power system audits are manual and reactive, providing limited asset visibility. Industry 4.0 requires audits to evolve into continuous, data-driven assessments based on physical HT/LT asset condition, enabling early risk detection, real-time visibility, predictive insights, and actionable maintenance decisions.

The impact of failure in the Electrical distribution can be tremendous

56%

Of all electrical fires are due to lack of proper maintenance.

1st

Cause of fire in industrial sites .22% of fires are due to electrical equipment failure

Source: FM global

59%

Of Total Business Interruption losses reported is due to fires & Explosion

Source: Allianz Claims 2015 Dashboard

Challenges:

- **Busbar Overheating**

  High current, vibration, loose joints, and corrosion cause busbar overheating, insulation damage, and fire risks—often undetected until failure.

- **Dependence on Manual & Periodic Inspections**

  Thermographic inspections are manual, infrequent, require panel opening, and provide limited, error-prone snapshot data.

- **Lack of Continuous Asset Visibility**

  Undetected busbar overheating can lead to major failures, causing extended shutdowns and production losses.

- **Hidden Moisture Ingress in Control Panels**

  High panel humidity causes condensation, corrosion, and insulation degradation, often unnoticed during manual inspections.

Digitization & Smart MRO (Maintenance, Repairing & Overhauling)

Main causes of failures and Customer pain points

- Low visibility in switch stations, unusual operating shocks
- Error-prone late corrections due to corrections due log aged and changing work orders
- Mechanical damage of vitaling power contacts leading to system tripping and machine damage
- Contacts resistance increase causing oxidation or corrosion in unmaintained connections
- Long maintenance window due to equipment utilization in continuous process plants
- Erosion of contact surface of sliding power contacts due to excess arcing by operators due to the prescribed limits

Solutions

- Physical Audit
- Continuous Monitoring
- Predictive Analytics
- Prescriptive Action
- Overhauling, Retrofitting & Spares

- Smart Busbar Thermal Monitoring
- Automated, Continuous Wireless Monitoring
- Predictive, Integrated Monitoring
- Continuous Humidity Monitoring

Why Digitization is a Requirement?

What is WB TMS

A Wireless Busbar Temperature Monitoring System is an intelligent and proactive solution for online monitoring system that continuously monitors temperature in busbar joints and wirelessly transmits real-time data to a control unit. By enabling early detection of potential heating, it enhances electrical safety, optimizes power distribution systems, minimizes unplanned downtime, and offers a cost-effective, easy-to-install alternative to traditional wired monitoring.

Features

- Wireless (RFID)
- Max 16T°/ measurement
- Up-to 3 meters range
- Battery life: lifelong use (>5 yrs)
- Silicon Snap withstands temperature upto 180°C
- Integration with SCADA system
- Alerting System (E-Relay for all critical related alerts)
- Control panel Temperature & Humidity
- Plug and Play Installation (20-30 mins)
- Compatible with 440 to 66kV systems

Humidity Sensors for Control Panel

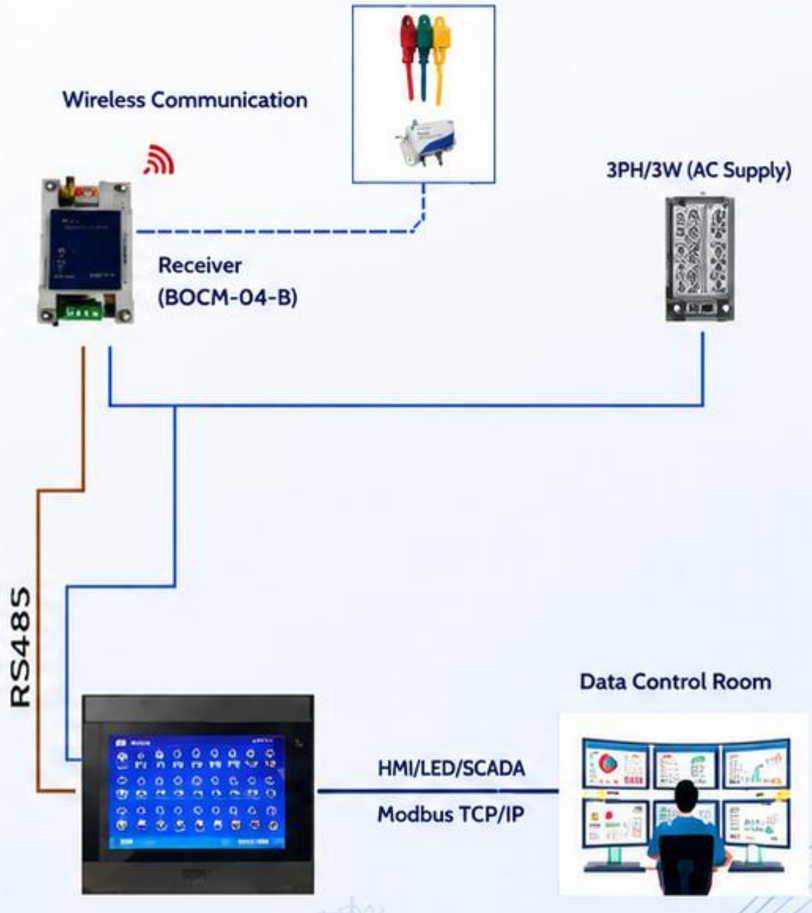

Features:

- Humidity Monitoring
- Continuous Monitoring
- Wireless Data Transmission
- Sensor capabilities
- Rangen (0-99%)
- Accuracy (±1%)

How it Works

- Enhances Electrical Safety
- Early Detection, Prevents Failures
- Minimizes Unplanned Downtime
- Non-intrusive, Easy Installation
- Reliable Monitoring for Critical Power Systems

A Handshake of Digital Software & Electrical Manufacturing Expertise

Comprehensive Monitoring
Covers both temperature and humidity.

Enhanced Safety
Continuous monitoring ensures system integrity.

User-Friendly Interfaces
Optional controllers with or without displays for versatile monitoring needs.

CSR AND SUSTAINABILITY

Teamwork, safety, health environment:

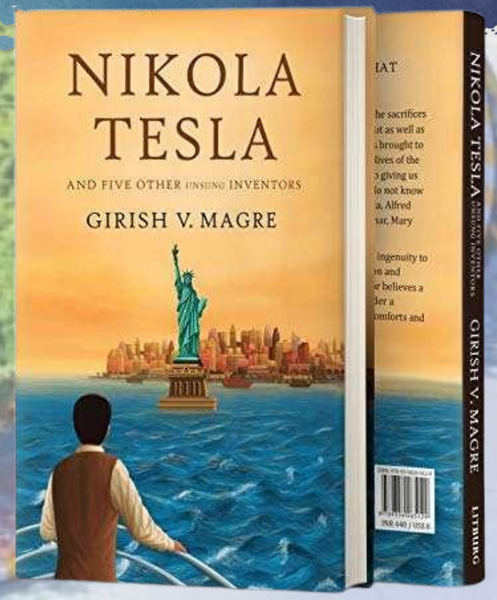

At BMC, cohesive team work is a standard model of functioning. Active involvement of the leadership and decision making freedom is encouraged along all levels. Hence all work flow is initiated after principally reaching a collective consensus.

BMC ensures the health & safety of its entire stakeholders and has successfully upheld a zero attrition rate of its human resources.

More than 30% of our factory premises is reserved for green space. Approximately 50% of the head office is powered by an in- house solar power generating facility.

BMC Actively engages with NGOs and Non Profit Organizations in empowering the education, health care and livelihood of the lesser privileged children and the ones with special need as a humble duty towards our corporate social responsibility.

Our contribution to Technology through a Technical Literature....
